

# High-Performance Precision Rotation Stages

## RV SERIES

The RV Series rotation stages provide high-precision angular positioning accuracy combined with high load capacity. There are five stage sizes and six drive configurations available, optimizing load capacity, torque, speed and resolution for a variety of operating conditions.

All RV stages are constructed of tool steel, with rotation accuracy ensured by ground bearing surfaces. A double row of preloaded bearings allows for high off-center loads in a reduced footprint. The single monolithic design offers improved stiffness without compromising dynamic performance. The largest RV stage can bear up to 6500 N or rotate up to 80 °/s, while maintaining less than 4 µm eccentricity.

Precise rotation is ensured by a precision ground and hardened worm gear. A rotary encoder mounted on the worm gear shaft provides 0.001° position feedback resolution (0.00025° resolution with RVS80CC) on the standard configurations. For more demanding applications, the HAT and HAHLT options are available on the RV120 to RV350 models. These stages are equipped with a direct reading optical encoder attached to the moving platen for superior resolution and accuracy.

The selection of the drive configuration should be based on the precision and speed requirements relative to the inertia of the payload.

### Motor Drive Versions

Stepper motor-driven stages are available in full step BPE and mini-step PP or BPP versions. The mini-step drive version enables high angular speed motions up to 20 °/s. The larger models, RV120BPP to RV350BPP, feature a worm mounted rotary encoder for improved accuracy and repeatability. The encoder also provides a method for detecting motor stalling, an important feature for applications with high acceleration ramps and high torques or payload inertias.

- Precision 80–350 mm diameter rotation stages
- Monolithic design ensures high structural stiffness
- Ideal for high-load application
- High-accuracy versions with direct reading encoder and better than 0.0001° (0.36 arcsec) resolution

### DESIGN DETAILS

Base Material	Stainless Steel	
Bearings	Double row ball bearings	
Drive Mechanism	Ground worm gear with self compensating preload	
Worm Gear Ratio	RVS80: 1:180 RV120 to RV350: 1:90	
Feedback	RVS80CC: Worm mounted rotary encoder, 8,000 pts/rev, Index pulse RVS80PP: None. One full-step equals 0.01° RV120 to RV350: <ul style="list-style-type: none"><li>• except for HAT and HAHLT versions: Worm mounted rotary encoder, 4,000 pts/rev, Index pulse</li><li>• HAT and HAHLT versions: Direct reading optical encoder on the rotating platen, 20 mm signal period</li></ul>	
Limit Switches	Optical, at ±170°, can be disabled for continuous rotation (except HAT, HAHL and HAHLT versions)	
Origin	Optical	
Cable Length	3 m cable included	
Vacuum Compatibility	Vacuum compatible versions are available up to 10 <sup>-6</sup> hPa using full-step motor, in this case, max. speed and load capacity have to be divided by two	
Weight [lb (kg)]	RVS80: 4.0 (1.8) RV120: 14.3 (6.5) RV160: 19.8 (9) RV240: 35.3 (16) RV350: 57.5 (27) RV120HAT: 17.6 (8) RV160HAT: 24.2 (11) RV240HAT: 41.9 (19) RV350HAT: 72.8 (33)	

# RV SERIES

The RVS80PP does not use an encoder. Instead, position is attained by the number of commanded steps and micro-steps. The high output torque of the stepper motor, combined with extensive performance tests, ensures position accuracy as long as the recommended load, torque and payload inertia are not exceeded. The RVS80PP provides very high motion sensitivity with good linearity between commanded micro-steps and the actual motion of the stage at a very reasonable price. The full-step PE version is equipped with a reduction gear providing higher torque. This version is only available on the models RV120 to RV350 and is recommended for high inertia payloads and vacuum applications.

DC motor-driven stages are available in high speed (CC and HAT) and high torque (CCHL and HAHLT) versions. The CC and HAT versions enable speeds up to 80 °/s. The HAT features a high-resolution direct reading encoder and tachometer for superior repeatability, position stability and speed regulation. The CCHL and HAHLT versions are equipped with a reduction gear providing higher torque and payload inertia capacity. The HAHLT features a high-resolution direct reading encoder and tachometer for superior repeatability, position stability and speed regulation.

<sup>(1)</sup> For the definition of Typical and Guaranteed specifications see "Motion Basics Terminology & Standards" Tutorial at [www.newport.com](http://www.newport.com)

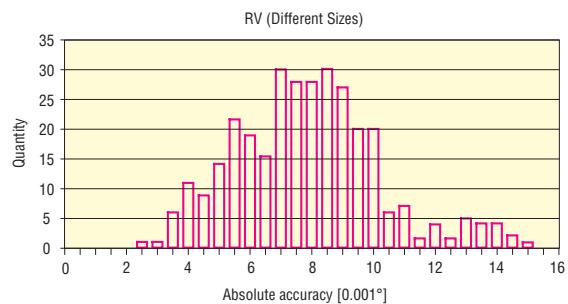

<sup>(2)</sup> To obtain arcsec units, divide prad value by 4.8.

Uni-directional repeatability plot for RV Series stages. The typical (mean) uni-directional repeatability is 0.001°. The guaranteed value is 0.002°.

Reversal value (Hysteresis) plot for RV Series stages. The typical (mean) reversal value is 0.001°. The guaranteed value is 0.002°.

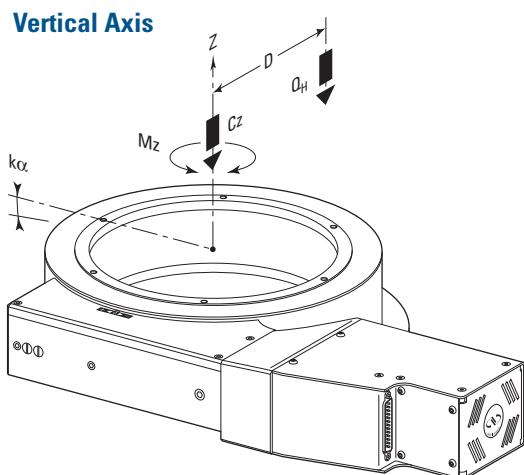

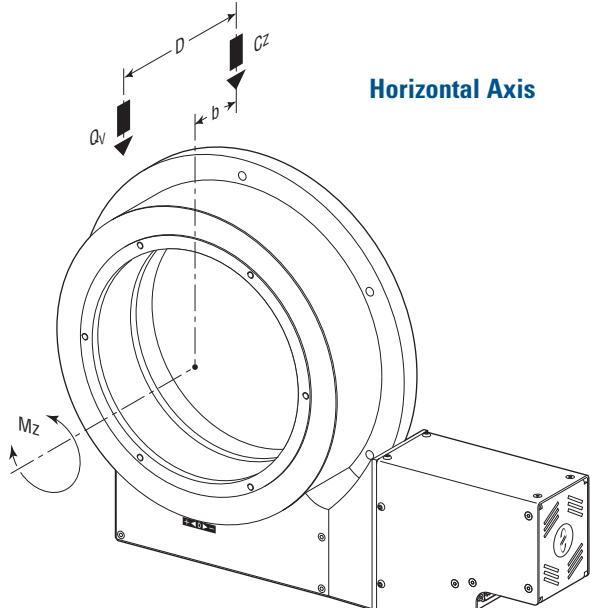

On-axis accuracy plot for RV Series stages. The typical (mean) on-axis accuracy is 0.001°. The guaranteed value is 0.002°.

## LOAD CHARACTERISTICS

	RVS80	RV120	RV160	RV240	RV350
Cz, Normal centered load capacity (N)	900	1800	2700	4000	6500
a, construction parameter (mm)	30	40	50	70	100
b <sup>(1)</sup> , (mm) except HAT, HAHL & HAHLT	39	53	57	59	73
for HAT, HAHL & HAHLT		71	75	77	91
kα, radial compliance (μrad/Nm)	3.5	1.5	0.6	0.3	0.1
Q <sub>H</sub> , Off-center load, vertical rotation axis		$Q_H \leq Cz \div (1 + D/a)$			
Q <sub>V</sub> , Off-center load, horizontal rotation axis		$Q_V \leq Cz/2 \div (1 + D/a)$			

<sup>(1)</sup> Construction parameter: Distance between the top surface of the RV stage and the bearing center.

**Example:** Q<sub>V</sub> at a distance D of 100 mm, for RV160 rotation stage.

$$Q_V = \frac{2700}{[2 \times (1 + 100/50)]} = 450 \text{ N}$$

In this example, the load Q<sub>V</sub> is placed at 43 mm (100 - 57) from the mounting plane of the stage.

**Example:** Q<sub>H</sub> at a distance D of 100 mm, for RV160 rotation stage.

$$Q_H = \frac{2700}{(1 + 100/50)} = 900 \text{ N}$$

# RV SERIES

## TORQUE AND PAYLOAD INERTIA

This table lists the maximum torque and the maximum payload inertia for all RV rotation stages. The maximum payload inertia equals the maximum kinetic energy that the rotation stage can absorb in the event of a sudden stop at the maximum speed. Likewise, this is the maximum inertia to accelerate from stop to the maximum stage speed in 250 ms. Some RV stages can handle higher payload inertias at reduced speed. For detailed information, please contact a Newport Applications Engineer.

*This Azimuth/Elevation gimbal system positions a 350 mm dia. mirror that can be used for laser based qualification and characterization of precision optical sensors, LIDAR analysis, or target tracking.*

Model	Max. Torque Mz (Nm)	Max. Inertia Iz (kg.m <sup>2</sup> )	Max. Speed (°/s)

## RECOMMENDED CONTROLLERS/DRIVERS

Model	Description
<b>XPS-D</b>	1- to 8-axis universal high-performance motion controller/driver
<b>XPS-DRV11</b>	Universal digital driver card for stepper, DC and direct motors
<b>XPS-RL</b>	1- to 4-axis universal high-performance motion controller/driver
<b>XPS-DRV01</b>	PWM drive module for DC brush and stepper motors, 3 A/43 V max.
<b>XPS-DRV03</b>	High performance PWM drive module for DC motors, 5 A/43 V max.
<b>ESP301</b>	1- to 3-axis motion controller/driver
<b>SMC100CC</b>	Single-axis DC motor controller/driver
<b>SMC100PP</b>	Single-axis stepper motor controller/driver

## COMPATIBLE CONTROLLERS/DRIVERS

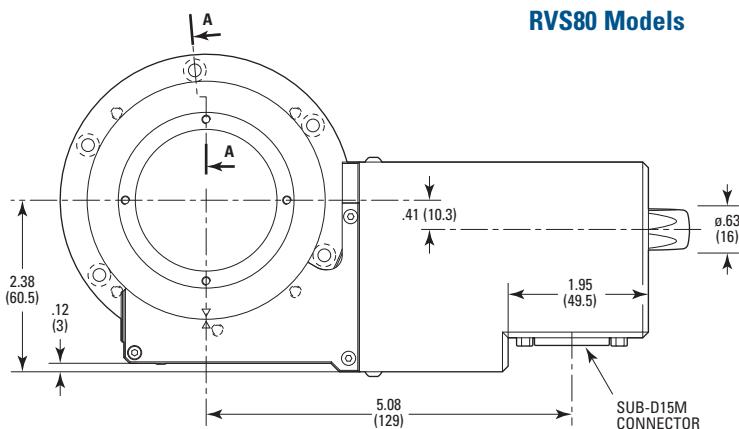

Family	Max. Power Consumption (W)	XPS <sup>(1)</sup> Driver Module	Compatibility		
			ESP301 <sup>(1)</sup>	SMC100CC <sup>(1)</sup>	SMC100PP <sup>(1)</sup>
